REASON FOR ALLOWANCE

1. Claims 1-9 are allowed.

2. The following is an examiner's statement of reason for allowance:

Ham (US 20040196229) shows apply the normal data to the liquid crystal panel at the initial half period of the frame after supplying of the modulated data to the liquid crystal panel during the later half period of the frame, thus a desired brightness level is achieved within the initial period of the frame.

Lee (US 20010038372) shows a driving method for LCD having a data gray signal modifier for receiving gray signal from a data gray signal source, and outputting modification gray signals by consideration of gray signals of present and previous frames; a data driver for changing the modification gray signals into corresponding data voltages and outputting image signals; a gate driver for sequentially supplying scanning signals and an LCD panel having a plurality of gate lines for transmitting the scanning signals; a plurality of data lines being insulted from the gate lines and crossing them for transmitting the image signals and a plurality of pixels formed by an area surrounded by gate lines and data lines and arranged as a matrix pattern.

The prior art fails to teach or suggest a method for driving a liquid crystal display (LCD) panel, the LCD panel comprising: a plurality of scan lines; a plurality of data lines; and a plurality of pixels, each pixel being connected to a corresponding scan line and a corresponding data line, and each pixel comprising a liquid crystal device and a switching device connected to the corresponding scan line, the corresponding data line, and the liquid crystal device, and **the method comprising: receiving continuously a**

plurality of frame data; generating a plurality of data impulses for each pixel within every frame period according to the frame data; and applying the data impulses to the liquid crystal device of one of the pixels within one frame period via the data line connected to the pixel in order to control a transmission rate of the liquid crystal device of the pixel as claimed in claim 1.

The prior art fails to teach or suggest a driving circuit for driving an LCD panel, the LCD panel comprising: a plurality of scan lines; a plurality of data lines; and a plurality of pixels, each pixel being connected to a corresponding scan line and a corresponding data line, and each pixel comprising a liquid crystal device and a switching device connected to the corresponding scan line, the corresponding data line, and the liquid crystal device, the driving circuit comprising: **a blur clear converter for receiving frame data every frame period, each frame data comprising a plurality of pixel data and each pixel data corresponding to a pixel, the blur clear converter delaying current frame data to generate delayed frame data and generating a plurality of overdriven pixel data within every frame period for each pixel; a source driver for generating a plurality of data impulses to each pixel according to the plurality of overdriven pixel data generated by the blur clear converter and applying the data impulses to the liquid crystal device of the pixel via the scan line connected to the pixel within one frame period in order to control transmission rate of the liquid crystal device; and a gate driver for applying a scan line voltage to the switch device of the pixel so that the data impulses can be applied to the liquid crystal device of the pixel** as claimed in claim 7.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
